

Refereed Publication of “15th International Conference on RF Superconductivity (SRF2011)” papers

SRF2011 authors who, in addition to publishing in the conference proceedings, wish to have a refereed publication are encouraged to consider submission of articles to a Special Edition of the online journal Physical Review Special Topics Accelerators and Beams ([PRST-AB](#)). Accepted papers, which relate to contributions of the SRF2011 workshop, will be issued in a special edition of this journal. Please note that for this option:

1. Papers must contain additional material to the paper published in the conference proceedings. Typically the article may follow the same structure as the article presented to the SRF2011 conference, but should contain extra theory, modeling, data, or data analyses.
2. Authors must submit their manuscripts directly via the [PRST-AB submission](#) website.
3. Papers will go through the standard independent refereeing process of PRST-AB.
4. Papers will be accepted up to 1 December 2011.
5. The issuing of a Special Edition is subject to a minimum number of papers being accepted.

To allow the necessary coordination with PRST-AB, authors are requested when they submit papers for the workshop proceedings to inform the PRST-AB SRF2011 Special Edition Editor (Jean Delayen) whether they also intend to submit an extended article to PRST-AB.

In 2009 there was a special 14th International Conference on RF Superconductivity (SRF2009) PRST-AB edition. You may find this edition at <http://prst-ab.aps.org/speced/SRF2009>
