Experimental Aside: Single B Meson Beams

Lots of interesting modes include one or more neutrinos.

“Beams” with a single, monochromatic B and without c, QED etc would be very useful for : $B \rightarrow \tau \nu$, $B \rightarrow \nu \nu$, $B \rightarrow K \nu \nu, \dots$

Fully reconstruct one of the Bs and study the remaining of the event \rightarrow closed kinematics, missing energy reconstruction

- Sensitive to new physics charged current

- Analysis:

- Undetected neutrinos result in large missing energy and few kinematic constraints – high background.
- Reduce the background by reconstructing the second B (“tag B”) in the event in the copious decay mode $B^- \rightarrow D^{*0} l^- \nu_l$
- Reconstruct $B^+ \rightarrow \tau^+ \nu_\tau$ with $\tau^+ \rightarrow l^+ \nu_{\text{bar}}$ or $\tau^+ \rightarrow h^+ \nu$, where $h = \pi, \rho, \text{ or } a_1$

- Forward-backward asymmetry is induced by interference btw virtual photon and Z^0 contributions.
- Relative signs and magnitudes of C_7 to C_{10} and C_9 to C_{10} can be determined from $A_{FB}(B \rightarrow K^*II)$!!

$$A_{FB}(q^2) = \frac{\Gamma(q^2, \cos \theta_{Bl^-} > 0) - \Gamma(q^2, \cos \theta_{Bl^-} < 0)}{\Gamma(q^2, \cos \theta_{Bl^-} > 0) + \Gamma(q^2, \cos \theta_{Bl^-} < 0)}$$
